Prognosis
8 Developing depression after a myocardial infarction increases risk of cardiac mortality but pre-existing depression does not

Therapeutics
9 A nurse delivered management programme for depression in people with cancer reduces depressive symptoms compared with usual care
10 Escitalopram and problem solving therapy reduce the incidence of poststroke depression
11 Review: Antidepressants are of limited efficacy in juvenile depression
12 Review: Insufficient evidence to guide use of drugs for clozapine induced hypersalivation
13 Antipsychotic medications do not differ substantially in ability to reduce violent behaviour in people with schizophrenia
14 CBT does not improve relapse rates in people with recently relapsed psychosis
15 Review: Adding psychosocial interventions to pharmacotherapy for opioid detoxification improves outcomes
16 Review: CBT reduces fatigue in adults with chronic fatigue syndrome but effects at follow-up unclear
17 Exposure and ritual prevention reduces symptoms more than stress management training in OCD treated with SSRIs
18 Review: Methylphenidate and psychosocial treatments either alone or in combination reduce ADHD symptoms
19 Chronically released methylphenidate is more effective than atomoxetine in children and adolescents with ADHD

Aetiology
20 Atypical antipsychotics fail to improve functioning or quality of life in people with Alzheimer’s disease
21 Dimebon improves cognitive function in people with mild to moderate Alzheimer’s disease

Prevalence
30 Antipsychotic prescriptions for children and adolescents in the UK increased from 1993 to 2005
31 People admitted to psychiatric hospitals commonly lack the mental capacity to make treatment decisions
