Purpose and procedure ...................... 98

EBMH Notebook

The Art of Evidence-Based Child Psychiatry ............... 99
Bipolar disorder ........................................... 101
Depression in children and adolescents ................... 103

Prevalence

Prodromal symptoms may be identified by people with bipolar or unipolar depression ........................................... 105
Risk of suicide remains high fifteen years after deliberate self-harm .................................................. 106
Expected levels of behaviour problems in a population sample of children between four and eighteen years ........ 107

Diagnosis

Insufficient evidence on benefits of early detection and treatment of dementia ........................................... 108
Nurse administered structured clinical interviews improve psychiatric diagnosis and treatment in community settings . 109

Therapeutics

Rofecoxib or naproxen do not slow progression of mild to moderate Alzheimer’s disease ............................. 110
Oestrogen plus progestin doubles the risk of dementia in post-menopausal women ........................................... 111
Targeted cognitive behavioural therapy may reduce relapse in people with prodromal symptoms of schizophrenia ........................ 112
Review: the case for antidepressants for treating depression in people with schizophrenia remains unproven ........... 113
Family focused psychoeducational therapy decreases relapse and rehospitalisation in people with a manic episode and bipolar disorder ........................................... 114

Group psychoeducation reduces recurrence and hospital admission in people with bipolar disorder ................ 115
Collaborative care speeds recovery from depression ........................................... 116
Review: selective serotonin reuptake inhibitors as effective as tricyclic antidepressants for major depression, and may have fewer adverse effects ........................................... 117
Review: repetitive transcranial magnetic stimulation is of unknown effectiveness in people with depression ........ 118
Gradual reduction of benzodiazepines, with or without cognitive behavioural therapy, increases successful withdrawal rates compared with no support in long-term users .................................................. 119
Helping parents solve stressful life problems enhances the effectiveness of interventions for child aggression and antisocial behaviour ........................................... 120
Review: evidence is lacking about suicide prevention in young people .................................................. 121
Review: therapeutic relationship is modestly correlated with treatment outcome in child and adolescent psychotherapy ........................................... 122

Behavioural family counselling reduces drug use in opioid-dependent men ........................................... 123
Trauma-focused group psychotherapy is not effective for posttraumatic stress disorder in Vietnam veterans ........ 124
Self-help manuals may reduce bingeing and purging in bulimia nervosa ........................................... 125
Review: stress is a problem for mental health nurses but research on interventions is insufficient ........... 126

Economics

Counselling may be more expensive than usual care for people with mental health problems, but may not be more effective for improving Beck depression score in the long term ........................................... 127

Qualitative

Stigma alone does not explain non-disclosure of psychological symptoms in general practice ................ 128
