Evidence-Based Mental Health

Contents

EBMH Notebook
65 Misconceptions about gene–environment interactions in psychiatry
Sanley Zammit, Michael J. Owen, Glyn Lewis
69 Evidence based mental health and Web 2.0
Stephen Ginn

Prognosis
73 Moderate or high physical activity lowers the risk of cognitive impairment in older people
74 High mortality and reduced quality of life in people who have presented to hospital for self-harm in the UK
75 Angiotensin receptor blockers associated with decreased incidence and progression of dementia in older men with cardiovascular disease
76 Review: ADHD impairs quality of life, but children and young people with ADHD perceive less impairment than parents
77 The EPOS prediction model improves ability to predict transition to first episode psychosis in individuals at high risk
78 Past or current drug or alcohol use disorders increase the likelihood of a switch from depressive to manic, mixed or hypomanic states in patients with bipolar disorder

Therapeutics
79 A GP training package for the treatment of anxiety disorders is not cost-effective
80 Injectable diacetylmorphine is more effective than oral methadone in the treatment of chronic relapsing opioid dependence
81 Escitalopram may improve some cognitive functions after stroke in non-depressed patients
82 Brief, personality-targeted coping-skills intervention reduces onset and escalation of drug misuse
83 Compared with fluoxetine monotherapy, mirtazapine plus venlafaxine or fluoxetine increase remission but not response in patients with major depressive disorder
84 Second generation antipsychotics are not superior in relieving family burden in schizophrenia compared with the first generation antipsychotic perphenazine

Aetiology
85 Bifrontal, bitemporal and right unilateral ECT electrode placement are similarly effective for reducing depressive symptoms
86 Review: evidence on the effect of antiepileptics on recurrent aggression inconclusive
87 A stepped care programme for depressive or anxiety disorders offers good value for money
88 Quetiapine is effective in the treatment of adults in the acute phase of bipolar depression

Prevalence
89 Current use of venlafaxine not associated with excess risk of sudden cardiac death or near death compared with fluoxetine, citalopram or dosulepin
90 Antipsychotic polypharmacy is not associated with increased mortality from natural causes in patients with schizophrenia compared to monotherapy
91 Cholinesterase inhibitor treatment may double the risk of hospitalisation for bradycardia

Treatment
92 Extremely preterm children at increased risk of autism spectrum disorders
93 Binge drinking frequent among adults aged 50 years and older

Diagnosis
94 Review: befriending modestly reduces depressive symptoms in varied populations
95 Review: exercise programmes reduce anxiety symptoms in sedentary patients with chronic illnesses
