EBMH notebook
APA, NAMI, NMHA, and evidence-based behavioural medicine: a comment ............................................. 32

Other articles noted ............................... 35

Prognosis
Review: longer duration of untreated psychosis is associated with worse outcome in people with first episode psychosis .................................................. 36
Cognitive function is not a prognostic factor for long term functional status in older people .................. 37

Diagnosis
The short form adult attention deficit/hyperactivity self-report scale is a useful diagnostic measure ........... 38
Adding a question that asks whether help is wanted improves sensitivity of a depression screening tool … 39

Therapeutics
Risperidone effectively increases rates of symptomatic remission of acute mania in people with bipolar disorder .................................................. 40
Aripiprazole reduces acute mania compared with haloperidol in bipolar 1 disorder and causes fewer adverse effects .................................................. 41
Olanzapine plus fluoxetine reduce depressive symptoms faster than either drug alone in people with treatment resistant depression .................................. 42
Review: cognitive behavioural therapy is more effective than control and similarly effective to pharmacotherapy for generalised anxiety disorder ........................... 43
Review: psychological treatments improve pathological gambling in the short and long term .................. 44
Methylphenidate hydrochloride reduces hyperactivity in children with pervasive development disorders ...... 45
Integrated care improves one year outcomes in first episode psychosis .................................................. 46
First episode psychosis: olanzapine and haloperidol provide similar improvements in quality of life and social functioning .................................................. 47
Adding sarcosine, but not D-serine, to risperidone improves symptoms in people with acute phase schizophrenia .................................................. 48
Telephone delivered cognitive behavioural therapy improves depression in people with multiple sclerosis faster than telephone delivered supportive emotion-focused therapy ........................................... 49
Counselling and cognitive behavioural therapy reduce anxiety and depression in women with postnatal depression .................................................. 50
A universally administered primary prevention programme for depression reduces symptoms in German adolescents with low self-efficacy ........... 51
Continued escitalopram reduces risk of relapse in people with generalised social anxiety disorder ............... 52
Combination treatment of behaviour therapy and medication significantly reduces obsessive-compulsive symptoms in people who have responded to pharmacotherapy .................................................. 53
Review: atypical antipsychotic drugs slightly increase mortality rates in elderly people with dementia ......... 54
Abstinence incentives improve stimulant abusers’ compliance with community-based psychosocial treatments .................................................. 55
Discontinuing risperidone results in relapse in children with autism spectrum disorders .................. 56

Aetiology
Adolescent panic attacks are associated with increased risk of personality disorder as a young adult .......... 57
Anxiety disorders are a risk factor for suicidal behaviour .................................................. 58

Prevalence
Major depressive disorder is common in the US among Native Americans, women, the middle aged, the poor, and widowed, separated, or divorced people .......... 59

Miscellanea
Correction .................................................. 34
