

Evidence-Based Mental Health

Contents

November 2010 Vol 13 No 4

EBMH Notebook

- 97** Politics and science in classifying the dangers of drugs
R Room, D I Lubman
- 100** What is so normal about the normal distribution?
S Reid

Aetiology

- 101** Spouses of people with incident dementia are at sixfold increased risk of developing dementia themselves
- 102** New users of the anticonvulsants gabapentin, lamotrigine, oxcarbazepine or tiagabine are at increased risk of suicidal acts compared with new users of topiramate

Diagnosis

- 103** Sensation seeking predicts established smoking and binge drinking in adolescents
- 104** The Patient Health Questionnaire 2-item is a rapid, sensitive and specific screening tool for identifying adolescents with major depression

Prevalence

- 105** Review: cognitive impairment present in people with affective psychoses
- 106** Negative symptoms are prevalent in antipsychotic-treated adult outpatients with schizophrenia spectrum disorders
- 107** Emotional and behavioural difficulties are more prevalent in 2–3-year-old children with developmental delay

Prognosis

- 108** Prescribing preferred medications improves adherence in people with severe mental illness
- 109** Anhedonia predicts adverse cardiac events in people with acute coronary syndromes
- 110** Children with ADHD at increased risk of adolescent ADHD, ODD, anxiety or depression and functional impairment
- 111** Opiate substitute treatment is associated with increased overall survival among injecting drug users
- 112** Depression in older people is associated with increased risk of developing dementia

Therapeutics

- 113** Review: psychological treatments lead to clinically significant reductions in pain in children and adolescents with chronic pain

- 114** Employment rates for people with severe mental illness in the UK not improved by 1 year's individual placement and support
- 115** The Family Bereavement Program reduces problematic grief in parentally bereaved youths
- 116** Review: mindfulness-based therapies effective for anxiety and depression
- 117** Atorvastatin does not slow cognitive decline in patients with mild to moderate probable Alzheimer's disease who are taking donepezil
- 118** Early school-based screening and intervention programmes for ADHD did not improve children's outcomes at age 10
- 119** Transference-focused psychotherapy reduces treatment drop-out and suicide attempters compared with community psychotherapist treatment in borderline personality disorder
- 120** Review: bupropion increases abstinence from smoking without affecting mental state in people with schizophrenia
- 121** Coordinated multi-component treatment in primary care improves anxiety in adults with multiple anxiety disorders compared with usual care
- 122** Adding aspirin to antipsychotics reduces psychopathology in adults with schizophrenia spectrum disorders
- 123** Ten-week comprehensive behavioural intervention for tics decreases tic severity compared to supportive therapy and education
- 124** Review: pharmacological and psychological interventions decrease cannabis use in people with depressive and psychotic disorders in the short term
- 125** CBT, SSRI or both are similarly effective for panic disorder 1-year post-treatment
- 126** Supervised injectable heroin better at reducing street heroin use than supervised injectable methadone or optimised oral methadone
- 127** Review: mood stabilisers monotherapy as effective as combination therapy for treatment of acute bipolar depression in studies with some limitations
- 129** A psychosocial intervention in low birthweight term babies improves performance IQ, visual-spatial memory and behaviour

Glossary

Electronic pages

- e1** Purpose and procedure
