Evidence-Based Mental Health

An international digest for
mental health clinicians

August 2012 Vol 15 No 3

Contents

August 2012 Vol 15 No 3

Editorial

- 53 Mental healthcare in prisons

EBMH Notebook

- 54 Mental health in an age of austerity

Aetiology

- 56 Stimulant treatment in healthy young people with ADHD is not associated with increased risk of cardiovascular events
- 57 Heritability of alcohol dependence is similar in women and men
- 58 Long working hours are associated with incident depressive and anxiety symptoms in women
- 59 Mortality risk in people with schizophrenia may vary according to class of antipsychotic used and concomitant medication
- 60 Association between biological parental suicidal behaviour and adopted child psychiatric hospitalisation is moderated by adoptive parental psychiatric hospitalisation
- 61 Atypical antipsychotics are associated with incident diabetes in older adults without schizophrenia or bipolar disorder

Prevalence

- 62 Review: exposure to premigration violence, gender and settlement location are associated with psychological problems among forcibly displaced children
- 63 Non-receipt of psychiatric treatment among people in the USA reporting suicide thoughts or attempts is more common among men, younger people and non-white ethnic groups
- 64 Review: major depression affects about 7% of adults aged 75 and above
- 65 DSM-IV disorders are highly prevalent and persistent among US adolescents
- 66 Prevalence of adolescents' suicide attempts and self-harm thoughts vary across Europe
- 67 Delusional-like experiences are more common in those with cannabis dependence disorder, very early-onset alcohol use or dependence disorders, and daily smokers

Prognosis

- 68 Method of most recent self-harm episode is related to risk of subsequent suicide
- 69 Some childhood autistic traits are associated with psychotic experiences in early adolescence

- 70 Review: transition to psychosis is high in people with clinical high risk of developing psychosis

Therapeutics

- 71 Twelve weeks' sertraline and CBT in young people with anxiety disorders increases likelihood of no longer having the diagnosis compared with placebo or monotherapy, but residual symptoms remain
- 72 Review: antidepressants are effective for the treatment of major depressive disorder in individuals aged 55 years or older
- 73 Review: insufficient evidence available on parent training programmes for ADHD in children
- 74 Review: methylphenidate and atomoxetine have similar efficacy and acceptability in children and adolescents with ADHD
- 75 Exercise reduces depressive symptoms in patients with a chronic illness
- 76 Review: group-based behavioural and cognitive-behavioural parenting interventions are effective and cost-effective for reducing early-onset child conduct problems
- 77 Review: no substantial differences in efficacy or effectiveness between second-generation antidepressants for major depressive disorder
- 78 Review: pharmacological and psychological interventions can reduce violent behaviour outcomes in high-risk populations
- 79 Review: evidence on the comparative effectiveness and adverse effects of antipsychotics in young people is limited
- 80 An 8-week peer-led parenting intervention reduces parent-reported behavioural problems in socially disadvantaged children
- 81 Internet-based CBT improves fatigue severity, physical function and school attendance in adolescents with chronic fatigue syndrome
- 82 Review: psychological and educational interventions may reduce risk of depressive disorders in children and adolescents
- 83 Review: limited evidence suggests that life skills programmes are no more effective than standard care or support groups for rehabilitation in chronic mental illnesses
