## Contents

### Purpose and procedure
- Withdrawing neuroleptic treatment from people with dementia, does not result in a significant change to their behaviour, psychiatric symptoms, or quality of life 111

### EBMH notebook
- Donepezil did not reduce the rate of institutionalisation or disability in people with mild to moderate Alzheimer’s disease 112

### Editorial
- Trauma focused cognitive behavioural therapy reduces PTSD more effectively than child centred therapy in children who have been sexually abused 113

### Prognosis
- Switching serotonin reuptake inhibitors may be of benefit in people with obsessive compulsive disorder 114

### Therapeutics
- Review: relying on published data alone overestimates efficacy and safety of SSRI s in children 115
- Review: combining pindolol with an SSRI improves early outcomes in people with depression 117

### Aetiology
- Increasing a partner’s understanding of motherhood significantly reduces postnatal distress and depression in first time mothers with low self esteem 116

### Prevalence
- Cognitive behavioural therapy significantly improves hypochondriacal symptoms 118

### Miscellaneous
- Review: current evidence does not show a strong causal relation between the use of cannabis in young people and psychosocial harm 119
- Concomitant loop diuretics and ACE inhibitors increase risk of lithium toxicity in elderly people 120
