**Purpose and procedure** ........................................ 94

**EBMH notebook**
- Evidence-based medicine: ethically obligatory or ethically suspect? ........................................ 96
- Response to Dr Gupta ........................................ 97

**Editorial**
- The worm turns: publication bias and trial registers revisited .................................................. 98

**Prognosis**
- Duration of untreated psychosis significantly associated with positive symptoms one year after treatment...... 101
- Acute stress disorder is of limited benefit in predicting post-traumatic stress disorder in people surviving traumatic injury ................................................................. 102
- Psychological function is mildly impaired for prolonged periods before and after first unipolar major depressive episode ................................................................. 103

**Therapeutics**
- Review: in people with schizophrenia, lithium is ineffective as sole therapy, while evidence on augmenting antipsychotics with lithium is inconclusive ........................................... 104
- Cognitive behavioural therapy improves psychotic symptoms at 18 months in people with schizophrenia ................................................................. 105
- Review: high doses of antipsychotic drugs are no more or less effective than medium doses in people with schizophrenia ................................................................. 106
- Review: combining pindolol with an SSRI improves early outcomes in people with depression ................................................................. 107
- Review: antidepressants are moderately effective in people with depression and a substance dependence disorder ................................................................. 108
- Review: St John’s Wort may be less effective than previously thought in people with depression ................................................................. 109
- PEARLS home based treatment significantly improves depression, dysthymia, and health related quality of life in older people ................................................................. 110
- Withdrawing neuroleptic treatment from people with dementia, does not result in a significant change to their behaviour, psychiatric symptoms, or quality of life ................................................................. 111
- Donepezil did not reduce the rate of institutionalisation or disability in people with mild to moderate Alzheimer’s disease ................................................................. 112
- Trauma focused cognitive behavioural therapy reduces PTSD more effectively than child centred therapy in children who have been sexually abused ................................................................. 113
- Switching serotonin reuptake inhibitors may be of benefit in people with obsessive compulsive disorder ................................................................. 114
- Review: relying on published data alone overestimates efficacy and safety of SSRIs in children ................................................................. 115
- Increasing a partner’s understanding of motherhood significantly reduces postnatal distress and depression in first time mothers with low self esteem ................................................................. 116
- Integrative Behavioral Couple Therapy is as effective as Traditional Behavioral Couple Therapy for distressed couples ................................................................. 117
- Cognitive behavioural therapy significantly improves hypochondriacal symptoms ................................................................. 118

**Aetiology**
- Review: current evidence does not show a strong causal relation between the use of cannabis in young people and psychosocial harm ................................................................. 119
- Concomitant loop diuretics and ACE inhibitors increase risk of lithium toxicity in elderly people ................................................................. 120
- Externalising problems and environmental stressors predict adolescent problems in children from divorced families ................................................................. 121
- Individuals with opioid dependence who leave drug treatment have higher overdose and death rates than those still in treatment ................................................................. 122

**Prevalence**
- Depressive disorders were the fourth leading cause of global disease burden in the year 2000 ................................................................. 123
- Personality disorders commonly occur in people with alcohol and drug use disorders ................................................................. 124

**Miscellaneous**
- Other articles noted ................................................................. 100
